CoMET Installation Instructions & Requirements
Author: Matthaus Litteken

Requirements
- Web server with PHP 5.3 and MySQL5 installed
- PHP with php_curl, php_mysqli and php_cli enabled
- PHP PEAR with Auth, MDB2, Net_SMTP, MDB2/mysqli and Mail installed
- Access to cron
- Virtual host for comet installation
- Either database creation privileges on the MySQL installation, or a database ready for CoMET
- If desired, existing IS4C database and installation

Instructions
- Unpack and copy CoMET.zip contents into the webroot
- Use the cometSchema.sql file to create the comet database tables and views
  - The comet database will need to exist prior to the next step
  - mysql -u <user> -p<password> comet < /webroot/cometSchema.sql
- Open and edit webroot/comet/includes/config.php
  - Replace default values with actual values
- Open a web browser to comet's domain
  - Use the default User admin (Password: admin) to log in
- Refer to the "Using CoMET" document for questions with basic use
